Rudra

Full Stack & Data Analytics Developer

+91 98968 00458 | 23rudragupta@gmail.com | linkedin.com/in/rudrag23 | github.com/Rudragupta23 | rudraguptaportfolio.live

EDUCATION

Vellore Institute of Technology *B.Tech, Computer Science and Engineering* *Sep 2023 – May 2027*
CGPA: **9.15 / 10.0**

TECHNICAL SKILLS

Languages:	Java, Python
Frontend:	React.js, JavaScript, HTML5, CSS3
Backend:	Node.js, Express.js, Django, REST APIs
AI & LLMs:	Gemini API, LLM Integration, Agentic AI
Data & Analytics:	Pandas, NumPy, Matplotlib, Seaborn
Databases:	MongoDB, MySQL, PostgreSQL
Tools & APIs:	Git, GitHub, AWS, Docker, Twilio

EXPERIENCE

Full Stack Developer Intern: The Cognitive – Toronto, ON, Canada (Remote) *Aug 2026 – Sep 2026*
MathCom Mentors | *React.js, Node.js, MongoDB, AWS* | **GitHub** | **Live Demo**

- Owned the project end to end for a London-based client – turned their requirements into the frontend and backend, with 4 separate user roles (admin/teacher, grader, student and parent), each with its own login and dashboard.
- Built the full homework workflow – teachers set work with a deadline, students submit it and graders mark each submission with written feedback – plus a study-material library, testing every flow before hand-over.
- Moved file uploads to AWS S3 served through CloudFront to keep them off the app server, used AWS SNS to send deadline reminders to students and grade alerts to parents and kept the codebase in Git with clear commits.

PROJECTS

Pahal Foundation: NGO Web Platform | **GitHub** | **Live Demo** *2026*
Django, Python, JavaScript, Razorpay, AWS S3

- Built a web platform for an NGO that educates underprivileged children, moving student admissions, student records, daily attendance and volunteer sign-ups off paper.
- Integrated the Razorpay gateway for online donations, with server-side payment verification and an auditable record of every transaction.
- Built 2 dashboards for admins and teachers to manage admissions, attendance, volunteers and media, with uploads offloaded to AWS S3 to keep files off the app server.

Healthcare Appointment Manager: AI Clinic Appointment Platform | **GitHub** | **Live Demo** *2026*
React.js, Node.js, Express.js, MongoDB, Gemini API, Google Calendar API

- Built a doctor appointment platform with 3 roles – patient, doctor and admin. Patients describe their symptoms before the visit and the Gemini model rates the urgency, summarises the problem and suggests 3 questions for the doctor to ask.
- Prevented double booking: a slot is held for 10 minutes while the form is filled in and when 10 patients book the same slot at once, exactly 1 succeeds and the other 9 are told it is taken.
- Automated the follow-up: each visit is added to Google Calendar, a reminder email goes out for every medicine dose (up to 3 a day) and failed emails are retried up to 5 times.

TrackMySpend: Expense Analytics & Spend Forecasting Application | **GitHub** *2025*
Python, Pandas, NumPy, Matplotlib, Seaborn, MySQL, Twilio, Tkinter

- Built a desktop analytics application for student finances that maintains separate online and offline balances against a savings goal, storing a categorised, multi-year transaction ledger in MySQL with date, category and type filters.
- Trained a least-squares linear regression over month-aggregated spending to forecast the next period's outflow, shown beside a running average, with Matplotlib/Seaborn charts of the spend trend and month-wise credited-versus-debited comparison.
- Integrated a Twilio WhatsApp channel so expenses can be logged by message, with a sync routine that parses incoming entries and reconciles them into the database behind authenticated accounts and encrypted, environment-managed credentials.

CERTIFICATIONS

- **AWS Cloud Practitioner Essentials – Gold (93%)** *FutureSkills Prime, 2026*
- **Oracle Certified Foundations Associate – Agentic AI** *Oracle University, 2026*
- **MongoDB Java Developer Path, Indexing Design Fundamentals** *MongoDB, 2026*
- **Frontend Developer (React), Node.js, SQL, CSS** *HackerRank, 2026*
